

Complete Overall Project Plan

Nepali Restaurant & Bar

1. Project Overview

This project is a modern restaurant and bar website with an admin management system. The platform is designed to create a strong digital presence for the restaurant while allowing staff and administrators to manage content easily.

The system combines:

- restaurant branding
- online reservations
- dynamic menu management
- staff management
- event promotion
- customer interaction
- admin dashboard management

The website should visually represent:

- Nepali culture
 - modern luxury dining
 - premium bar atmosphere
 - warm hospitality experience
-

2. Main Objectives

The main objectives of the project are:

- build a professional online presence
 - attract more customers
 - improve customer engagement
 - showcase food and restaurant atmosphere
 - simplify reservation management
 - promote events and offers
 - provide easy content management for admins
 - improve SEO visibility
-

3. Website Type

The system is a:

Dynamic Restaurant Website

It contains:

- static informational pages
 - dynamic admin-controlled content
 - reservation management system
 - staff management system
 - event management system
-

4. Main Website Modules

A. Public Website

The public-facing website includes all customer-accessible pages.

Technologies

- Next.js
- React.js
- Tailwind CSS

Benefits

- fast loading
 - SEO friendly
 - scalable architecture
 - modern animations
 - reusable components
-

9. Backend Technology

Recommended backend stack:

Technologies

- Node.js
- Express.js

Responsibilities

- APIs
 - authentication
 - database management
 - reservation processing
 - admin management
-

10. Database Planning

Recommended database:

MongoDB Atlas

Main Collections/Tables

Users

Stores admin accounts.

Reservations

Stores booking data.

Menu Items

Stores food information.

Staff

Stores employee profiles.

Events

Stores event information.

Gallery

Stores uploaded images.

Contact Messages

Stores customer inquiries.
